

Welcome to TargaCell.com! I am Cathy Phillips, the CEO of TargaCell! We are dedicated to delivering stem cells to repair broken hearts!

At TargaCell, we are committed to alleviating the pain and suffering from heart disease — heart attacks & heart failure. My co-founder, Robin McWherter, and I have experienced firsthand what happens after a heart attack with my father and her mother.

We are not alone! Every year more than 805,000 people suffer a heart attack! Everyone knows someone who has had a heart attack! The financial cost over a lifetime for this heart attack is more than a million dollars! But this cost pales compared to the suffering it causes to the patient, their spouses, and their families — the lost time from work, family activities, and enjoying life!

Within 5 years of a heart attack, 18% will develop heart failure for which there is no effective treatment, no cure - except a heart transplant! In addition, this carries the lifelong burden of taking and enduring the side effects of immunosuppressive drugs.

Stem cell therapies to repair the damage resulting from a heart attack have been discussed and investigated for over 10 years. However, this therapy has not reached its full potential because using current methods, not enough stem cells can be delivered to the heart damage and stay there long enough to complete repair and restore heart function. Thus, heart failure remains a significant unmet medical need!

TargaCell has developed an efficient stem cell delivery technology that delivers 10X the number of stem cells to the heart and retains them long enough to repair damage and restore function! When repairing hearts, the more stem cells, the better repair!

TargaCell's vision is to develop a simple, safe, easily accessed heart repair therapy that cures — not just a bandaid —but fixes heart damage and restores heart function and quality of life to patients and their families!

Join us and explore how TargaCell's stem cell delivery technology can transform into reality our vision of fixing broken hearts.

Blessings to All,

Cathy Phillips
